

ABSTRACT

An animal feed additive that includes an effective amount of a naturally occurring source of humic acids and fulvic acids is provided. Preferably, this animal feed additive includes at least about 25% humic acids and fulvic acids in combination on a dry weight basis. This animal
5 feed additive may be combined with nutrients to form an animal feed, which is another aspect of the present invention. Still further, the present invention includes a method of feeding animals the feed described above.
